Mirror, Not Magic

The LLM is a looking glass — not a wonderland.

It reflects your material back, structured through CBSA.
Every claim sourced. Every step approved by you.

Alice decides where and when to step.

Low Floor, High Ceiling

After Mitchel Resnick's design principles for Scratch

Chat-native platforms

Claude Projects · Gemini · GPTs

Maximum human-in-the-loop — every step is a conversation
Full prompt transparency — readable, editable, challengeable
User controls the LLM directly in natural language

Not a standalone app

No React + Node + API production stack

We gave up polished agentic UX — which has real advantages — because CBSA should be driven by human judgment, not automated by agent workflows.

Stay Current, Stay in control

LLMs evolve fast. Our platform choice keeps us on the edge.

Test the latest models the moment they ship — no migration, no refactoring.

No API costs that make us conservative with the deep, multi-stage analysis CBSA demands.

No architectural lock-in. What works today doesn't constrain tomorrow.

The tool serves the assessor. The assessor doesn't serve the tool.
